

AVIS GOODWIN COMMUNITY HEALTH CENTER **Constructs New 30,000 s.f. Medical Office Building**

Jobin Construction Consultants was hired by the Avis Goodwin Community Health Center to serve as project consultant for their new medical office building. We were responsible for coordinating selection of the project design team, proposed site evaluation, and the permitting process.

Jobin Construction Consultants was also responsible for the supervision and management of the construction process, owner supplied equipment, and relocation of 4 existing sites into this new facility.

The building, designed by Warrenstreet Architects, is a combination of primary care, mental health, dental, and prenatal exam rooms. The building is designed using highly efficient mechanical systems and building envelope materials. The goal was to provide a sustainable and energy efficient building that will have low operating costs.

Avis Goodwin Community Health Center is a non profit agency currently serving over 8,000 patients a year. This new facility will allow Avis Goodwin to service an additional 3,000 patients.

The project, which was funded in part using an ARRA FIP Grant, was completed in May 2011.
