

JCC Selected as Owner's Representative for Classroom and Exterior Envelope Renovations at Manchester Community College

Jobin Construction Consultants was selected by the Manchester Community College to oversee and manage the renovation of several classroom spaces as well as exterior wall replacement at the Knox Building.

The entire exterior east wall of the Knox Building was removed and replaced with new wall structure, moisture barriers, windows, insulation, and metal panel/brick exterior. This work was part of a classroom renovation with HVAC upgrades at each floor. The project was completed during the summer while student population was directed to other areas of the building. The newly designed HVAC and exterior systems will greatly reduce the heating and air condition cost of the building.
