

JCC Selected as Owner's Representative for New Student Center Expansion at Manchester Community College

Jobin Construction Consultants was selected by the Manchester Community College to oversee and manage the construction of their new 30,000 s.f. Student Center.

The student center expansion includes a large multi purpose room, kitchen and dining area, Yoga room, workout center, lounge space and also provided a bridge to adjacent classroom spaces. This project created a space for students to gather, study, relax, and enjoy the campus amenities. The building, designed by Lavallee Brensinger Architects, is constructed of structural steel and metal panels, and provides large amounts of glass to allow daylight to fill the space. The addition was funded entirely by the student population.

Also included in the project was a renovation to the adjacent existing spaces. This addition and renovations were completed while the campus remained in full operation while minimizing disruption to the student and staff population.
