JCC Named Construction Project Manager for Renovations at St. John's Regional School in Concord, NH

St. John's Regional School and the Diocese of Manchester selected Jobin Construction Consultants to be the project manager for renovations at the Concord campus.

The buildings, which are over 150 years old, required upgrades including a new fire suppression system. In Barry Hall, an existing 3 story stair was removed and replaced with a new code compliant stair system. Along with the stair, structural upgrades and other cosmetic features were repaired and replaced. The design was completed by Berard Martel Architecture.

This project was fast tracked so that the majority of the work was completed prior to start of the new school year.
